WHY IT MATTERS

Certifications you can verify, not just claim.

CLOUD Azure Expert MSP	SECURITY MISA Member	COMPLIANCE SOC 2 Type II	STANDARDS ISO 27001 Aligned
---	---------------------------------------	---	--

In managed IT, anyone can call themselves an expert. Certifications exist so you don't have to take that on faith. Each credential SKYTEK holds is awarded by an independent authority — Microsoft, the Microsoft Intelligent Security Association, and accredited audit firms — against standards you can look up and confirm.

These aren't badges for a website. They are the practical evidence that the team managing your environment has been measured against the highest bar in the industry, and continues to meet it through annual re-assessment.

WHAT THEY SIGNAL

Three guarantees behind the credentials.

<p>SIGNAL 01</p> <p>Proven capability</p> <p>Top-tier certifications are earned through demonstrated technical depth, customer references, and rigorous assessment — not paid membership.</p>	<p>SIGNAL 02</p> <p>Independent verification</p> <p>Third-party auditors and platform vendors validate SKYTEK's practices, so the assurance comes from outside the company, not inside it.</p>
<p>SIGNAL 03</p> <p>Ongoing accountability</p> <p>Credentials require continuous re-certification. Standards held today must be re-proven on an annual cycle to be retained.</p>	<p>SIGNAL 04</p> <p>Vendor escalation</p> <p>Partner status opens direct, prioritized support channels to Microsoft and security vendors — faster resolution when it counts.</p>

THE BOTTOM LINE

When you hand an MSP the keys to your environment, certifications are how you confirm the team holding them has been independently held to the highest standard — and still is.

Four standards that define the work.

SKYTEK's certifications span the two areas that matter most for modern IT — cloud delivery and security — plus the compliance frameworks that hold both accountable.

Azure
Expert
MSP

MICROSOFT · CLOUD

Microsoft Azure Expert MSP

The highest tier of Microsoft's managed-service-provider program, reserved for a small group of partners with deep, audited Azure delivery capability. Earning it requires an independent third-party assessment of architecture, operations, and customer outcomes — renewed annually.

MISA

MICROSOFT · SECURITY

Microsoft Intelligent Security Association (MISA)

An ecosystem of the leading security software vendors and service providers that have integrated with Microsoft's security platform. Membership reflects validated expertise across Microsoft Defender, Sentinel, and Entra — the foundation of SKYTEK's managed detection and response.

SOC 2
Type II

AICPA · COMPLIANCE

SOC 2 Type II Audited

An independent audit of how SKYTEK protects client data over time — not a point-in-time snapshot, but a review of controls operating across a sustained period. Covers security, availability, and confidentiality, the assurances enterprise and regulated clients require.

ISO
27001

ISO · STANDARDS

ISO 27001 Aligned

SKYTEK's information security management practices are built to align with ISO 27001, the international standard for managing information security risk — a documented, reviewable framework governing how data and systems are protected.

Backed by the best in the industry.

Certifications are reinforced by direct partnerships with the platform vendors our clients run on. These relationships give SKYTEK enterprise-grade tooling, prioritized support escalations, and early access to roadmap and engineering expertise.

<p>Microsoft</p> <p>AZURE EXPERT MSP</p> <p>Cloud, identity, and security platform — the core of SKYTEK delivery.</p>	<p>MISA</p> <p>SECURITY ASSOCIATION</p> <p>Validated integration across the Microsoft security stack.</p>	<p>VMware</p> <p>CLOUD VERIFIED</p> <p>Virtualization and private/hybrid cloud infrastructure.</p>
<p>Cisco</p> <p>NETWORKING PARTNER</p> <p>Enterprise networking, SD-WAN, and secure connectivity.</p>	<p>Fortinet</p> <p>SECURITY PARTNER</p> <p>Next-generation firewalls and network security fabric.</p>	<p>Dell</p> <p>TECHNOLOGY PARTNER</p> <p>Server, storage, and endpoint hardware lifecycle.</p>

What each partnership delivers to clients

PARTNER	DOMAIN	CLIENT BENEFIT
Microsoft	Cloud & identity	Expert MSP architecture, prioritized Azure support escalation
MISA	Security	Validated Defender / Sentinel / Entra detection and response
VMware	Virtualization	Verified private and hybrid cloud infrastructure delivery
Cisco	Networking	Enterprise-grade, resilient network design and support
Fortinet	Network security	Layered perimeter and segmentation for critical environments

WHY PARTNERSHIPS MATTER

When an incident escalates, vendor partnership status is the difference between a public support queue and a direct line to the engineering team behind the platform.

Credentials that translate into outcomes.

Certifications and partnerships are only valuable when they change the day-to-day experience of being a client. For SKYTEK customers, they show up in concrete ways.

Top tier Azure MSP status	Audited SOC 2 Type II	Direct Vendor escalation	Annual Re-certification
-------------------------------------	---------------------------------	------------------------------------	-----------------------------------

For technology leaders

- Independent proof of capability to satisfy boards, auditors, and cyber-insurers.
- Architecture and security practices measured against the highest industry bar.
- A partner whose standards are re-proven every year, not assumed.

For operations

- Faster incident resolution through prioritized vendor support channels.
- Access to enterprise-grade tooling without enterprise procurement overhead.
- Confidence that the team holding your keys has been externally vetted.

“
Certifications aren't trophies — they're a promise we have to re-earn every year. That accountability is exactly what a client is buying when they choose a certified partner.
 SKYTEK Engineering · Managed Services

The bottom line

The most trusted certifications in cloud and security exist to remove guesswork from a high-trust decision. SKYTEK holds them — and maintains the partnerships behind them — so that choosing a managed partner comes down to verifiable evidence, not marketing.

WORK WITH A CERTIFIED PARTNER

The credentials are proven. Let's put them to work.

Whether you need cloud, security, or fully managed IT, SKYTEK brings top-tier certifications and deep vendor partnerships to your environment — starting with a no-obligation review.

- Microsoft Azure Expert MSP — among the most experienced Azure partners worldwide
- MISA member with validated Microsoft security integration
- SOC 2 Type II audited · ISO 27001 aligned
